to discuss your dryer needs.

## *Beauty and Function in One - The Defender*

The Defender brings Pest-Proof to a whole new level.

Protecting dryer ducting from birds or other woodland creatures has been a challenge. Code says screens cannot be used and for good reason, but most vent covers offer little resistance to persistent animals.

The Defender brings a whole new look to the ducting that needs serious protection. Made of steel and powder coated for years of protection, The Defender protects existing duct covers, while adding additional weather protection, and meets code requirements. Can be retro-fit into most dryer vent installations to add beauty and protection to the dryer venting.

Available in White, Tan or Brown, call today to see if The Defender is something that can help keep pests out of your dryers ducting.
